including a bottle works and a packing plant; and at about the same time a flour mill was built in nearby Shantzuchiao. More recently, a drug factory employing nearly a hundred people was built in Hsulin, and since the war a textile industry has developed in the market town of Panchiao. Although there are still not enough positions for all those seeking employment, these developments have at least created for some village men the possibility for something other than an agricultural income.

At about the same time as these new resources were developing, the need for something other than an income from agriculture was becoming pressing in Hsiachichou. Within thirty years of their occupation of Taiwan, the Japanese colonial government introduced a broad and highly effective medical program with the inevitable result that the infant mortality rate over the succeeding twenty years fell dramatically. Thus while new opportunities for employment were being created the future work force was increasing at a rapid rate. Even then, however, these developments would not have had a substantial effect upon the village had it not been for one further change. To work in the drug factories or the textile mill at least a minimum of education is required, and without such education the villagers might never have been able to compete with more urban dwellers for employment opportunities. Fortunately an elementary school was established in Chichou in the first decade of this century, so that by the time the shift in economy took place the majority of the male villagers were at least literate.

178 Tea was added later and since the demand for labor
245 inputs in tea production tend to occur during relatively
464 slack periods in the cycle of rice production, tea helped even out the demand for labor.

Oranges, which were added more recently, are a second leveling factor in the seasonal labor demands because the date when most required work such as fertilizing, spraying with insecticide, and weeding must be completed is not cru-
[293] cial to eventual production quantities. This technology is unlike that for rice which permits few delays in many steps without serious reduction in the eventual size of the harvest. The only requirement in citrus cultivation for large prompt labor inputs comes during the harvest season which falls in December and January when both rice and tea cultivation activities are either non-existent or are at their slackest periods.

178 This ecological and technological adjustment has
562 been a prime factor contributing to the elevation of the
464 status of women. Some agricultural tasks such as tea pick-
[245] ing and tea sorting are considered appropriate only for
[462] women, and other tasks such as orange orchard weeding are
[314] considered appropriate for either men or women. Because there are jobs such as coal mining readily available for mature men in the immediate area around the village, there has been little surplus of male labor exerting pressure to
[288] replace women with men. In the younger age groups, the

362 operations of the cloth and clothing factories around Taipei
464 which require relatively unskilled labor inputs of a nature
[288] which can be accomplished by women, again draw on the female labor pool in Talei Li. Together, these various factors function to make female labor valuable and this fact necessarily means a level of relative economic independence for females. Moreover, in terms of agricultural activities alone, the addition of citrus cultivation to tea cultivation has made possible employment for women every month of the entire year since the demands of each have very little overlap. The combination covers the entire year fairly evenly.

The Daily Cycle

512
[221] From the above facts, it can be seen that there is no such thing as a typical day in Sanlei Ts'un. There are seasonal differences due to the great differences resulting from the major agricultural activities being performed at
[796] the particular moment in time. There are at least 60 special
[527] religious holidays each year, some relatively minor, when the daily pattern of behavior varies and a few national secular holidays as well with similar varying behavior pat-
[871] terns. Monday through Fridays differ from Saturday which has a half-day of school instead of a full day and even more from Sunday when the school and several factories are closed. A greater number of visitors come to the village on
[871] Sunday and most farmers reduce their work loads. The summer
